

# XNET Solana Migration - Phase One

Welcome to our XNET Token Bridge Guide! In this document, we'll walk you through the detailed steps for migrating your XNET tokens across different networks, ensuring a smooth transition from Polygon or Ethereum to Solana. Please follow each step carefully and refer to the provided resources to make this process as seamless as possible. LFG!

For the purposes of this document, when we refer to the original Polygon XNET we will refer to it as **(P)XNET**, for ETH wrapped XNET we will use **(EW)XNET**, for Wormhole(Portal Bridge) wrapped XNET will use **(W)XNET**, and for the final migrated token on Solana we will refer to it as just **(XNET)**.

**The process flow for migrating tokens goes as follows:**

**(P)XNET -> (W)XNET -> XNET**

**(EW)XNET -> (W)XNET -> XNET**

## **Notes and Important Considerations:**

- You **must** use a desktop browser for this process.
- You **must** use a browser that does not have any other wallet installed/enabled except **MetaMask** and **Phantom** wallets.(You may have to disable Phantom wallet extension to connect Metamask to the first part of the bridge then re-enable it when connecting Solana wallet with phantom)
- You will need about \$5 USD equivalent of MATIC and \$5 USD equivalent of SOL to complete this bridge.
- This process is tested to work. **Be very sure you follow this process exactly.**
- If you do not follow these bridge instructions, you're on your own. **We can not, unfortunately, support every combination of app, wallet, chain, etc.**

Please watch this video and follow along while reading the instructions:

 **XNET Token Bridge How-to**

## Bridging \$(P)XNET from Polygon to Solana Using Wormhole Bridge

**Note:** This documentation assumes you use MetaMask or another Polygon/ERC20 wallet and are bridging XNET tokens to Phantom wallet.

### Step-by-Step Instructions

#### Step 1: Install Phantom Wallet

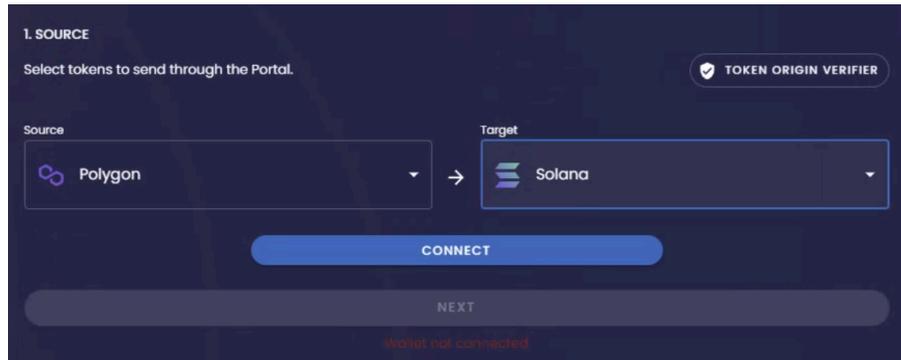

1. Download and install the Phantom Wallet extension to your web browser from the [official website](#).
2. If you have never created a Solana wallet before, follow the instructions from the [official Phantom wallet guide](#) to create a new Solana wallet.

#### Step 2: Add some SOL to Your Wallet

1. Ensure you have some Solana (SOL) in your new wallet before continuing.
2. Recommended methods for acquiring SOL:
  - [Coinbase](#)
  - [KuCoin](#)
3. You'll need around \$5 USD equivalent to SOL to complete the bridge in most cases.

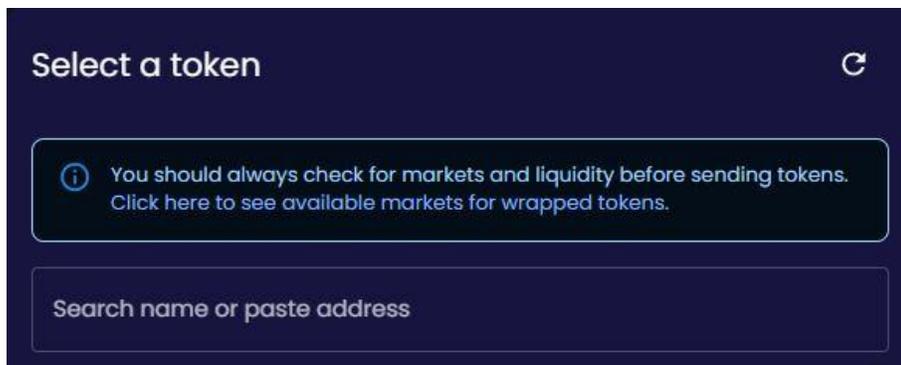

#### Step 3: Access Wormhole Bridge **Advanced** Transfer Tool

1. Visit [Portal Bridge Advanced Tools](#) using your browser or Phantom's in wallet's web3 browser. (You must use the Advance Wormhole bridge to complete the migration)
2. Select either **Polygon** as "Source" -> and **Solana** as "Target" or **Ethereum** as "Source" -> and **Solana** as "Target", Depending on which chain you currently on XNET tokens on and want to bridge from
3. Now click "Connect Wallet," choose Metamask, and confirm. (You may have to disable Phantom wallet extension to connect Metamask to the this part of the bridge then re-enable it when connecting Solana wallet part of the bridge, This happen when Phantom wallet try to take priority over metamask as to which wallet to connect first)

## Step 4: Select Correct Token

1. Under "**Select a Token**," paste the following based on which XNET token chain you are migrating from.

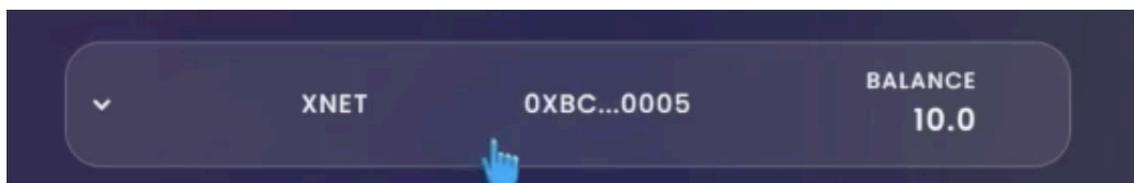

For **Polygon** use \$(P)XNET contract address:

`0xbc5eb84c052fd012bb902c258c9fd241b17c0005`

For **Ethereum** use \$(EW)XNET contract address:

`0x5393cEeD9a265Bda7952780E5b9413150e666a24`

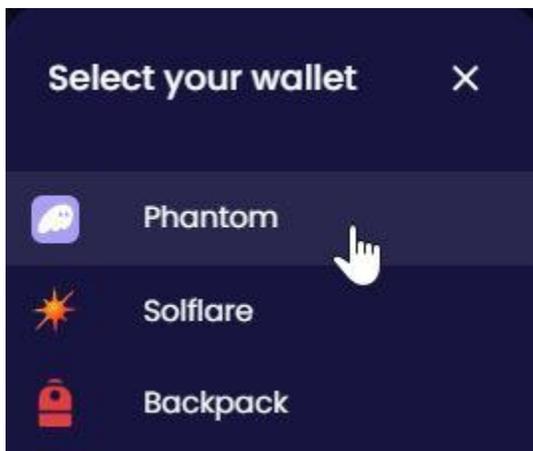

2. The token may appear as "**XNET**" or "**Unknown**" Choose the amount (or max) that you want to bridge and click "**Next**."

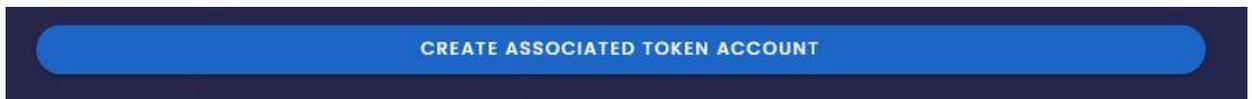

## Step 5: Connect Your Solana Wallet

1. Click "**Connect**" and choose Phantom from the dropdown list.

2. You will then likely need to "create associated token account", this will prompt you through a series of confirmations from the phantom wallet.

2. TARGET  
Select a recipient chain and address.

Solana

DISCONNECT HKJ...GC5

Bridged tokens:  
8kZK...UQ19 (Amount: 10.0)

Sent to:  
DEBR...659g (Current balance: 0)

How would you like to pay the target chain fees?

Automatic redeem is unavailable for this token.

Manual Payment  
Pay with your own SOL on Solana

NEXT

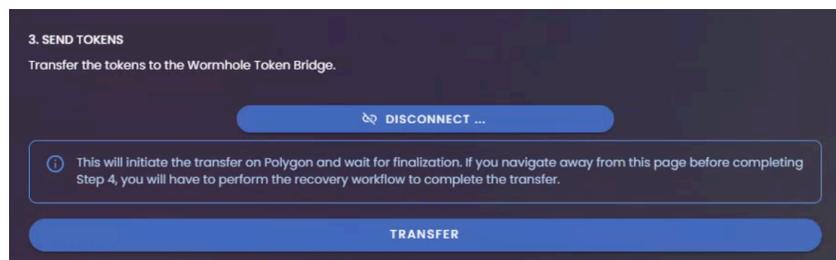

3. Once the created associated token account is created select “**next**”.
4. Next confirm the token amount you want to move by selecting “**Approve**”, A Metamask popup will generate a popup for you to approve the amount to be transferred via you wallet and the token bridge contract. Confirm and approve the transaction then hit next in the popup window.

APPROVE 50.0 TOKENS

## Step 6: Send Tokens

1. Click "**Transfer**" and confirm the transactions after verifying the amounts.

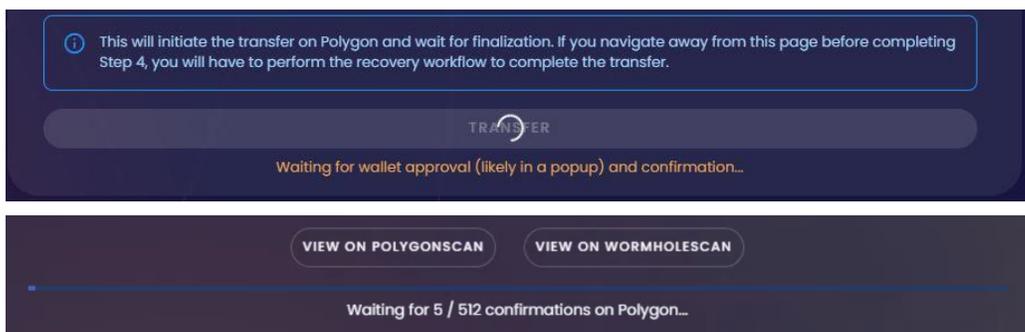

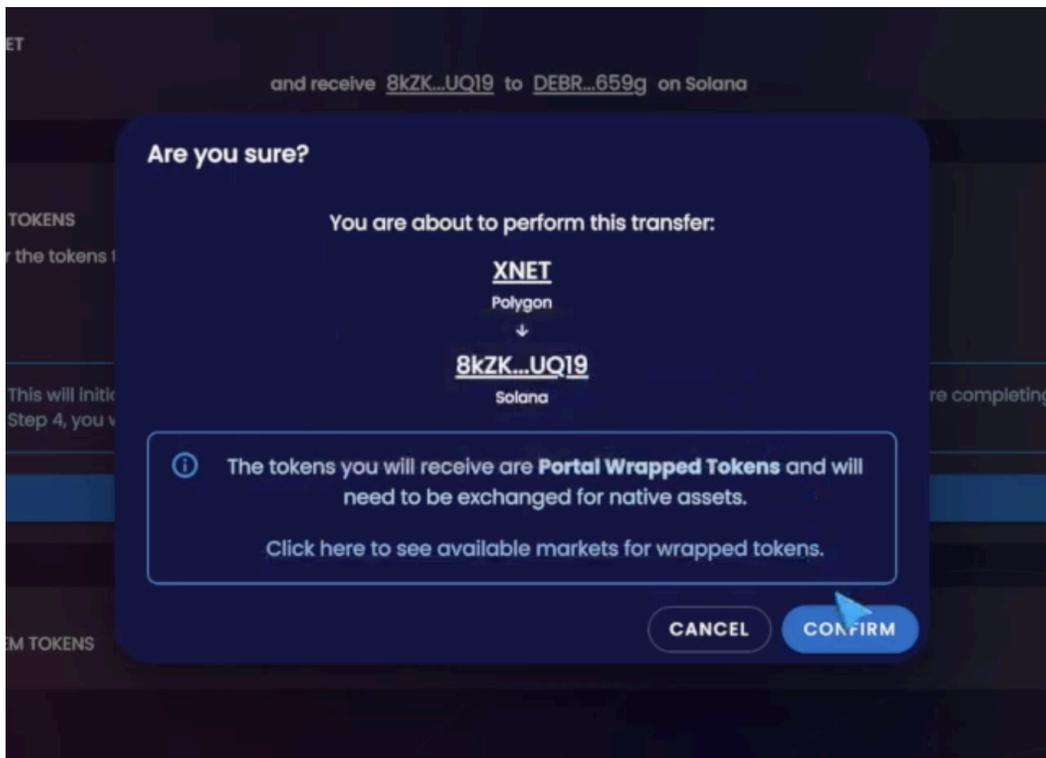

2. Next you will "**confirm**" that the tokens are moving from the Source chain to the Target chain in the correct order. A new Metamask transaction confirmation popup will show on your confirmation the transaction and the migration transfer will begin.

**Note:** This process can take up to 30 minutes during times of high congestion, but

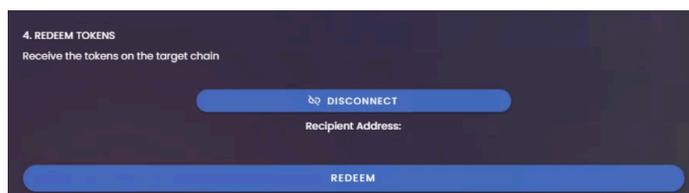

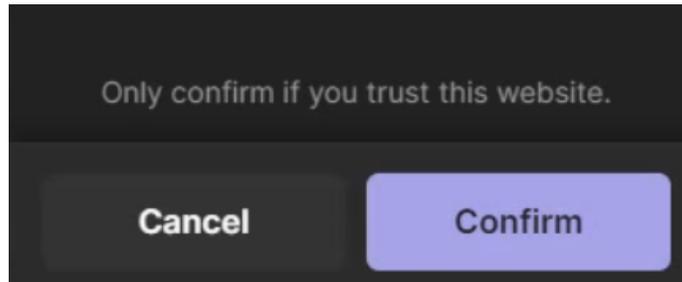

typically only takes 2-3 minutes.

## Step 10: Redeem Tokens

1. Click the "Redeem" option to finalize the transfer. You will see 4-5 confirmations from the Solana wallet to complete the transfer.

### Step 11: Bridge Complete!

1. Congratulations, you have successfully bridged \$(P)XNET from Polygon to Solana \$(W)XNET using Wormhole Bridge! You should see this XNET token in your wallet now.
